Appln. Serial No. 10/800,828
Amendment Under 37 C.F.R. § 41.33

AMENDMENTS TO THE SPECIFICATION

Please amend the Specification as follows:

On pages 6 and 7, amend ¶ [0021] as follows:

[0021] This sequence may be readily seen in FIG. 2A. The scrambler 212 that is associated with server 211 [[221]] listens for connection attempts from prospective clients, such as client 221, on a port 213. In one embodiment, it is known, at least by authorized clients, that scrambler 212 listens for connection attempts on a predetermined port 213. Port 213 may have, for example, a port number of tcp/3000. In response to a connection attempt from client 221, scrambler 212 transmits a decoy port number, say tcp/1026, to client computer system 22. The decoy port number is provided to wrapper 222. As will become clear below, the decoy port number is a port number that enables an authorized user to determine a valid port number, i.e., to connect to a valid port. The decoy port number is of no use to an unauthorized user, such as a hacker.
